Speaker of the House of Representatives	Secretary
Approved	FILED
Governor of the State of Washington	Secretary of State State of Washington

ENGROSSED SUBSTITUTE SENATE BILL 5305

AS AMENDED BY THE HOUSE

Passed Legislature - 2006 Regular Session

State of Washington 59th Legislature 2006 Regular Session

By Senate Committee on Health & Long-Term Care (originally sponsored by Senators Rasmussen, Benton, Roach, Swecker, Zarelli, Regala, Stevens, Shin, Delvin, Franklin and Mulliken)

READ FIRST TIME 03/02/05.

- 1 AN ACT Relating to the use of mercury-containing vaccines; adding
- 2 a new section to chapter 70.95M RCW; and creating a new section.
- 3 BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF WASHINGTON:
- NEW SECTION. Sec. 1. The legislature finds that vaccinations and 4 5 immunizations are among the most important public health innovations of the last one hundred years. The centers for disease control and 6 7 prevention placed vaccinations at the top of its list of the ten greatest public health achievements of the twentieth century. 8 efforts to improve public health in the world's poorest countries, the 9 10 Bill and Melinda Gates foundation has identified childhood immunization as a cost-effective method of improving public health and saving the 11 lives of millions of children around the world. 12
- Fortunately, in Washington, safe and cost-effective vaccinations against childhood diseases are widely available through both public and private resources. The vaccines that the Washington state department of health provides to meet the requirements for the recommended childhood vaccination schedule through its universal childhood vaccine program are screened for thimerosal and preference is given toward the purchase of thimerosal-free products. The department of health

currently provides thimerosal-free products for all routinely 1 2 recommended childhood vaccines. Regardless of the absence of thimerosal in childhood vaccines in Washington, scientifically 3 reputable organizations such as the centers for disease control and 4 prevention, the national institute of medicine, the American academy of 5 pediatrics, the food and drug administration, and the world health 6 7 organization have all determined that there is no credible evidence that the use of thimerosal in vaccines poses a threat to the health and 8 safety of children. 9

Notwithstanding these assurances of the safety of the vaccine supply, the legislature finds that where there is public concern over the safety of vaccines, vaccination rates may be reduced to the point that deadly, vaccine-preventable, childhood diseases return. This measure is being enacted to maintain public confidence in vaccine programs, so that the public will continue to seek vaccinations and their health benefits may continue to protect the people of Washington.

<u>NEW SECTION.</u> **Sec. 2.** A new section is added to chapter 70.95M RCW to read as follows:

- (1) Beginning July 1, 2007, a person who is known to be pregnant or who is under three years of age shall not be vaccinated with a mercury-containing vaccine or injected with a mercury-containing product that contains more than 0.5 micrograms of mercury per 0.5 milliliter dose.
- (2) Notwithstanding subsection (1) of this section, an influenza vaccine may contain up to 1.0 micrograms of mercury per 0.5 milliliter dose.
- 27 (3) The secretary of the department of health may, upon declaration 28 of a public health emergency, suspend the requirements of this section 29 for the duration of the emergency.
- 30 (4) All vaccines and products referenced under this section must 31 meet food and drug administration licensing requirements.
